

Enzo Jesuan Del Sole

Full Stack Developer | Backend Focus

Tandil, Buenos Aires, Argentina • +54 2494642370 • enzodelsole@gmail.com • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Full Stack Developer with a Backend focus and a Technical Degree in Application Development (TUDAI). Hands-on project experience building APIs, microservices architectures, authentication, testing, and cloud deployments, primarily using Java, Spring Boot, and PostgreSQL. Currently working as an E-Commerce Analyst on Mercado Libre's Catalog project, focused on product management and data quality. Interested in Backend / Java development roles where I can deepen my skills in best practices, clean code, scalability, and systems integration.

PROFESSIONAL EXPERIENCE

E-Commerce Analyst — Mercado Libre Catalog Project | Grupo Kelsoft

Argentina | April 2025 – Present

- Managed and maintained Mercado Libre's product catalog, focusing on improving product data quality and consistency.
- Created, updated, and removed products through an interface integrated with the platform.
- Collaborated on resolving operational workflow issues and adapted to new tools and project processes.

TECHNOLOGIES

Backend: Java, Spring Boot 3, PHP, microservices, Eureka Server, API Gateway, JWT, Keycloak, MVC

Frontend: Angular 16, TypeScript, JavaScript, HTML, CSS/SCSS, Angular Material, Chart.js, Bootstrap, Smarty

Data & Cloud: PostgreSQL, GCP, Cloud SQL, App Engine, Kubernetes Engine (GKE), Docker, MockAPI

Testing & Tools: JUnit, Mockito, Postman, Git, Git Flow, Figma, Slack, Excel, Office, Kanban, agile methodologies

SELECTED TECHNICAL PROJECTS

Inventory Management System — Full Stack / Cloud

- Application for managing categories and products, with a Spring Boot 3 backend, PostgreSQL database, and Angular 16 frontend.
- Implemented authentication with Keycloak and deployed to GCP using Kubernetes Engine for Keycloak, Cloud SQL for PostgreSQL, and App Engine for the frontend and backend.
- Tested the API with Postman and the backend with JUnit and Mockito.

Stack: Java, Spring Boot 3, PostgreSQL, Angular 16, Keycloak, Docker, GKE, GCP, JUnit, Mockito, Git Flow, Postman, Angular Material, Chart.js

Repos: [Backend](#) | [Frontend](#)

E-Scooter API — Monolithic & Microservices Architecture

- Fleet management system developed in two variants: a monolithic architecture and a microservices-based architecture.
- Distributed architecture across five main domains, with CRUD operations per service, Eureka Server for service discovery, and an API Gateway for centralized routing.
- Implemented JWT and Bearer Token authentication, along with API documentation and testing.

Stack: Java, microservices, Eureka Server, API Gateway, JWT, Bearer Token, testing, API documentation

Repos: [Microservices](#) | [Monolith](#)

Vehicle Catalog API — Team Project

- Contributed to the development of a PHP API for managing vehicles and categories, applying the MVC pattern and separation of concerns.
- Integrated frontend and backend using JavaScript and asynchronous requests to consume API data.

Stack: PHP, JavaScript, MVC, Smarty, Bootstrap

Other Projects: [Video Game Website](#) (HTML, CSS, JavaScript, Figma, Mobile First) | [Mate Shop](#) (Angular 16, TypeScript, SCSS, MockAPI)

EDUCATION

Technical Degree in Application Development (TUDAI)

Universidad Nacional del Centro de la Provincia de Buenos Aires — Tandil, Argentina | April 2022 – June 2025

COURSES & TRAINING

Spring Boot & Angular: Building Full Stack Applications — Udemy | 35 hours | [Certificate](#)

LANGUAGES

Spanish: Native | **English:** Basic–Intermediate (Technical)
